

Ezywire™

*The World's Simplest, Most
Versatile and Effective
Wire Handling Invention*

Ezywire™ OVERVIEW

Pre-fabricated wire rolls up to 1200mm high can be loaded onto the **Ezywire™** without any manual lifting, either off the ground or straight off the back of a truck. Once the roll is in the vertical position they can be dispensed straight onto posts if required because the patented 3 roller outrigger system resists the wire dispensing so there is some tension on the wire as you drive. Models vary from a single wire roll to a 4 roll capacity. There is nothing else in the world to match the **Ezywires™** simplicity, versatility and effectiveness.

Multiple plain wire spinners and barb spools can be handled on elbows that fit onto the wire roll shafts. These elbows have a braking system that stops overrun of the wire. If necessary the **Ezywire™** can be detached and chained to a post or pegged down to the ground and the vehicle (tractor/bobcat etc.) can pull out multiple wires in one pass, such as when wire is pulled through split posts or in places a tractor cannot get.

When it comes to difficult terrain or jobs with obstructions the **Ezywire™** really pays its way because, if necessary, you can even dispense wire onto the opposite side of the fence from where the vehicle is. Running wire across a creek or dam has never been easier.

Ezywire™ FEATURES

- Models to suit forks or direct hitch to the machine
- Flat packs for shipping when required
- Knocks down to manageable weight parts
- No need for machine hydraulics
- Models light enough to be used by mini diggers (Dingo type machines) up to large tractors with loaders.
- No friction damage to wire at all
- Easy method of threading centre spear through small centre holes - you don't have to precision drive it through
- Detachable outrigger strainer makes feeding out and straining a breeze
- Tough rubber rollers guide, grip and clamp wire without damage or the need for hydraulics
- Outrigger operates either side of the machine, you can dispense forwards or backwards
- Rollers easily removed.
- Makes tying wire to posts much easier because it is in a vertical position
- Will halve your labour or double your output
